Extend your range with an ATL Fuel Bladder - Review

Aero Tec Labs (Aero Tec Laboratories - Aero Tec Labs - Aerotech - ATL - Aerotec - AeroTech Labs, Fuel Cells, Cell, Bladders, Bladder, Bladder Tanks, Tank, Potable Water Bladders, Pillow Tanks, Tank Containment, Portable Tanks, Tank, Liquid Storage, Collapsible Tanks, Tan) is the world leader in the flexible composites industry. Several years ago they entered into the Fuel Bladder Business.

Looking forward to the next Team BD Boat, we wanted to extend our range for those long trips down Baja or out to the Cortez bank. After a little research we learned ATL was the go to company for these products.

A quick call to Dave Dack at ATL and we had a brand new ATL FuelLocker in route to us with all the goodies.

We chose the Fuel Locker for one main reason, when it is full it take a more boxy shape than traditional fuel bladders and also requires much less deck space due to this shape.

A few days later, we get a box from ATL and we can't wait to check it out.

The first thing you notice is QUALITY. This thing is built to last and has VERY high end, non corrosive hardware.

We also ordered the strap kit to keep the FuelLocker secure while traveling. Again, nothing but the top notch hardware.

Wanting to make the most of our set up so we got the UV sun cover, mesh carry bag and under mat to protect the bladder.

The new FuelLocker has made a trip with us yet, but we are more than confident that it will stand up to the test. The material is heavy duty, the hardware is top notch and we look forward to many years of service from our FuelLocker.

Take a look for yourself at [Marine Gas/Diesel Fuel Bladder Tanks and FuelLockers for Extended Range](#)
