CUSTOMER TESTIMONIAL

"We have been using your bladders on our pipeline pre-commissioning equipment. We fill the bladders with chemical cocktails for treating pipelines. The cocktails consist of corrosion inhibitor, oxygen scavenger, biocides and dye. We either pump the chemicals from the bladder or use a venturi type injection system to get them into the pipeline. We have used the ATL bladders on numerous deployments in the Gulf Of Mexico, Brazil and West Africa and are extremely satisfied with both their quality and durability."
